

What is ZOEF?

The goal of the framework and how the official training is organized.

The name

- ZOEF stands for **Zero Operational Error Framework**.
- It is Cognizant's operational excellence and quality assurance model, mandatory or highly recommended for employees.

The goal

- **Eliminate avoidable incidents.**
- **Make service delivery predictable.**
- **Mitigate risks** that could interrupt the business of the client or of Cognizant.

Why it matters on the Service Desk

Every ticket is a point where an avoidable error can reach the client. ZOEF gives a common way to spot and prevent those errors before they become incidents.

The official training

- It is organized by proficiency levels, for example **ZOEF - V2 [201-INTERMEDIATE]**.
- It is available only on the **Cognizant Learning and Development Center**, the company's internal learning platform.

Key points

- ZOEF = Zero Operational Error Framework.
- Goal: no avoidable incidents, predictable delivery, lower risk.
- Official course: Cognizant Learning and Development Center.
