

The pillars of ZOEF

The six pillars that detect vulnerabilities early, with a focus on knowledge management, automation and competency development.

Six pillars

ZOEF uses **six pillars** to identify vulnerabilities early. This module covers two of them; the official course covers all six.

Knowledge Management and Automation

- Audit practices for **Standard Operating Procedures (SOPs)**.
- Sharing of **best practices** across the team.
- Automated **self-help / self-heal** workflows that raise productivity and remove manual steps where errors happen.

Delivery Process and Competency Development

- Makes sure teams are **properly qualified**.
- Keeps **processes standardized**, so the same case is handled the same way by anyone on the team.

Applying it on the Service Desk

- Keep the knowledge base up to date and report outdated SOPs.
- Suggest automations for repetitive tasks.
- Complete the trainings assigned to you (like this one) to keep your skills current.

Key points

- ZOEF has six pillars.
- Knowledge Management and Automation: SOP audits, best practices, self-help / self-heal.
- Competency Development: qualified teams and standardized processes.
